

Pattern Viewer Manager (PVM) Software

Although Sweet Dreams does not work for nor provide customer support for the PVM software, we can offer some information about viewing the encrypted patterns (.PAT or .CSQX) using this software:

Open PVM Software

Click on Tools

Click on Pattern Passwords Tab

Click on Add

If you have a pet name for your Statler, enter it here and then enter its corresponding controller number or red key number. It's important that the number you enter here is the **exact** same number to which your patterns have been encrypted.

Click Ok.

Additionally, your PVM software comes preloaded with an extensive Tutorials section, with screen shots and good instructions.
